

Powered by Artificial Intelligence

The BUZZ US Sentiment Leaders ETF ("BUZZ ETF") identifies the 75 most bullish U.S. stocks based on investment insights derived from the vast content generated across online platforms.

- Millions of unique stock-specific data points aggregated from online sources including social media, news articles and blog posts are processed on a monthly basis.
- The data is filtered through an analytics model which utilizes Natural Language Processing Algorithms and Artificial Intelligence applications.

HOW IT WORKS:

1. Where's the BUZZ?

First, from a defined investment universe of U.S. stocks, the BUZZ Index targets the most mentioned stocks discussed across online platforms.

2. What's the BUZZ?

The BUZZ Index looks at what the online community is saying about these most-mentioned stocks and whether the BUZZ is positive, negative or neutral on a collective basis.

3. Who is creating the BUZZ?

The BUZZ Index pinpoints influencers within the online community and identifies whose tweets and posts are most likely to impact collective opinion. It also identifies and scores which members of the online community have historically been the most successful in their forecasting accuracy.

Each of the most mentioned stocks are then given an insight score and the 75 stocks with the most bullish scores are included in the BUZZ Index.

PERFORMANCE as of 12/31/18

	Cumulative				Annualized	
	1 Month	3 Month	6 Month	YTD	Since Inception	1 Year Since Inception ¹
BUZZ US Sentiment Leaders ETF (Net Asset Value)	-9.35%	-18.32%	-11.85%	-0.73%	27.14%	-0.73% 9.29%
BUZZ US Sentiment Leaders ETF (Market Price) ²	-9.51%	-18.53%	-12.42%	-1.05%	26.82%	-1.05% 9.18%
BUZZ NextGen AI US Sentiment Leaders Index - Total Return ³	-9.42%	-18.35%	-11.79%	-0.41%	28.53%	-0.41% 9.73%

¹ Fund inception date of 4/18/2016

² Market Price is based on the midpoint of the bid/ask spread at 4 p.m. ET and does not represent the returns an investor would receive if shares were traded at other times.

³ BUZZ NextGen AI US Sentiment Leaders Index is comprised of 75 stocks with the highest "positive insight" rankings collected from online forums. These stocks must meet certain market capitalization and average daily trading volume requirements to be included in the index and are weighted based on a proprietary scoring model developed by BUZZ Indexes Inc. One may not invest directly in an index.

Performance data quoted represents past performance. Past performance does not guarantee future results. Current performance may be higher or lower than actual data quoted. Call 1.866.759.5679 or visit www.alpsfunds.com for current month end performance. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost.

Subject to change.

The Fund will invest at least 90% of its net assets in securities that comprise the Underlying Index. Under normal conditions, the Fund generally will invest in all of the securities that comprise the Underlying Index in proportion to their weightings in the Underlying Index; however, under various circumstances, it may not be possible or practicable to purchase all of the securities in the Underlying Index in those weightings.

IMPORTANT DISCLOSURES & DEFINITIONS

An investor should consider the investment objectives, risks, charges and expenses carefully before investing. To obtain a prospectus, which contains this and other information call 866.759.5679 or visit alpsfunds.com. Read the prospectus carefully before investing.

BUZZ US Sentiment Leaders ETF shares are not individually redeemable. Investors buy and sell shares of the BUZZ US Sentiment Leaders ETF on a secondary market. Only market makers or "authorized participants" may trade directly with the Fund, typically in blocks of 50,000 shares.

The ability to invest based on social media analytics is relatively new and untested. The Fund may invest a significant portion of its assets in securities issued by companies in the information technology sector in order to track the Underlying Index's allocation to that sector.

These types of funds typically have a high portfolio turnover that could increase transaction costs and cause short-term capital gains to be realized.

The Fund is not suitable for all investors. There are risks involved with investing in ETFs including the loss of money. The Fund is considered non-diversified and can invest a greater portion of assets in securities of individual issuers than a diversified fund. As a result, changes in the market value of a single investment could cause greater fluctuations in share price than would occur in a diversified fund. Funds that emphasize investment in small/mid cap companies will generally experience greater price volatility. Diversification does not eliminate the risk of experiencing investment losses. ETFs are considered to have continuous liquidity because they allow for an individual to trade throughout the day.

Natural language processing (NLP) deals with the application of computational models to text or speech data. NLP algorithms can be used in Sentiment analysis to identify and extract subjective information in source materials. Sentiment analysis is widely applied to reviews and social media for a variety of applications, ranging from marketing to customer service.

Artificial intelligence (AI) is the intelligence exhibited by machines or software. One of the central problems (or goals) of AI research include natural language processing (communication).

Social media, as it relates to the ETF, refers to social media sites.

Some examples of social media sites may include, but are not limited to, the following: Facebook, Twitter, LinkedIn, Digg, Reddit, RSS, blogs, Investopedia, stock forums, etc.

Defined investment universe of US stocks - in order to be eligible for inclusion in the Underlying Index, a company's stock must be traded on one or more major U.S. exchanges, have a minimum market capitalization of at least \$5 billion, and have a 3 month minimum average daily trading volume of \$1 million.

Investing in companies based on social media analytics involves the potential for market manipulation because social media posts may be made with an intent to inflate, or otherwise manipulate, the public perception of a stock or other investment.

Text and sentiment analysis of social media postings may prove inaccurate; that is, high positive sentiment may not correlate with negative change in the value of a company's stock.
